If you have publications listed in an online database, you will be able to create a Google Scholar profile.

ResearchOnline@JCU is an important source of publication records for populating your Google Scholar profile, so make sure you have all the publications that you would like in your Google Scholar profile listed in your ResearchOnline@JCU profile.

The following screenshots for creating your Google Scholar profile are limited because I would need to create a second Google Scholar profile for myself to create a step by step guide. Don’t be put off by this though because, creating a Google Scholar profile tends to be easier than what you need to do for a Scopus, ORCID or ResearcherID profile.
1. Go the Google Scholar website: 
2. If you already have a Google account, click on “Sign in”
3. If you don’t have a Google account, click on “My citations”
1. If you already have a Google account, enter your email address and password and click on the “Sign in” button
2. If you don’t have a Google account, click on the “Create an account” link and follow the prompts
This is how your complete Google Scholar profile should look.

- Make sure your profile is public
- Include five keywords and your full position title
- If you want to add or delete records, select the relevant tick box on the left and then the “Add” or “Delete” options – note that Google Scholar may have included spurious records, so need to check all records and delete any that are not actual publications
